

YELLOWSTONE

NATIONAL PARK LODGES

Compost

All of our paper and plastic foodware, except plastic wrap, is biodegradable!

Help reduce waste by using bins labeled "COMPOST" for food, PLA-labeled bioplastic, and paper containers—including the lids!

For other items, use bins labeled for Recycling  or Landfill 

Did You Know?

Our “to go” cups for cold drinks are made of plants. The cups and lids look like plastic, but aren't! That's right, Yellowstone National Park Lodges provides guests with renewable and compostable PLA (polylactic acid). PLA is a natural plastic made from plant sugars. The cups are designed to be composted, not recycled.
